

The Arctic

The Arctic, also known as the North Pole, is a snowy, icy area at the very top of the globe.

Temperatures here can get as cold as -70°C !

Even though it is so cold here, it is home to lots of wonderful wildlife, including polar bears, Arctic foxes, walruses, seals and whales.

Here are just a few animals that live in the Arctic

Polar bear

Walrus

Arctic fox.

Reindeer

Narwhal

Snowy owl

Your task is to either:

- Draw, paint or make an Arctic animal - you can choose from the animals I have shown you or find your own.
- Write as many facts as you can find on the Internet about these animals that live in the Arctic- what do they eat? How big can they grow? What colour are they, and why?
- Or, write a few sentences telling me about why you would, or wouldn't like to live in the Arctic.

Think about what you would live in, what you would miss, would you take anyone with you, if so who?
